Video On Demand
Live Webcast

AcuSTUDIO/LIVE VOD and Live Webcast

In the face of epidemic flu, high transport cost and global economies, the need to communicate effectively and to provide business continuity prove to be an ever increasing challenge. This is the challenge that AcuSTUDIO/LIVE undertakes.

Scalable Architecture

Aculearn rich media communication solution suite is used and proven by Telcos, Corporations and major universities connecting thousands of people together.

True “all in one” rich media solution

On one single scalable architecture, Aculearn delivers all your rich media communication needs with the provision of live web broadcasts, real time interactive conference/ work collaboration and creation and distribution of on demand learning content.

Working within your secure network

Aculearn solution is used in places with high network security demands. Our solutions work with proxy server, domain authentication and most types of Microsoft ISA security settings. In fact, the system can be linked with Microsoft Active Directory system to protect user access.

Animations Support

Unlike other products, using annotation tools will not freeze these animations. AcuSTUDIO/LIVE support animations such as PowerPoint animations, animated GIF as well as Flash.

Web collaboration

In web collaboration, AcuSTUDIO/LIVE allows user to scroll the web page and annotate using its comprehensive set of annotation tools. Unlike other products, annotation will not destroy hyperlinks within the webpage. Users can continue to navigate through the web pages after annotations.

Optimal Performance Redirection

Participants are automatically redirected to the AcuSTREAM with the best network response. The respective AcuSTREAMs will interconnect to reduce international bandwidth utilization.

Saving bandwidth through OPR and multicast LIVE

LAN PCs on multicast network

AcuLIVE makes use of multicast technology to reach mass audience in excess of tens of thousands. Only one upstream is needed per broadcast to reach mass audiences.

Manage link content

You can link any information such as movies, doc, PDF files from on your local hard disk. The system will upload these contents to the server and preserve the links. AcuSTUDIO/LIVE does not flatten the image when you use annotation over presentation slide, all hyperlinks are still accessible.

Unicode Support

Even if you have an English operating system, Unicode support allows you to use AcuSTUDIO in other languages. Trainer can include multi-language transcript to reach out to audience with different language needs. Playback content automatically detect your computer settings and display transcript in the preferred language.

Easy to use Graphical User Interface

AcuSTUDIO/LIVE GUI resembles that of Microsoft PowerPoint. You get all the type of views as well as drag and drop to move your presentation slides around. Of course you can insert, modify and delete any presentation slides as well. The major difference from that of Microsoft PowerPoint is that you can open Word Document, Picture files, Excel as well!

User can switch from web cam to screen capture during recording

Dynamic Source Switch

Training is not restricted to video presentation only. AcuSTUDIO allows the trainer the switch between video presentation to screen capture. This will allow the trainer to conduct software training.

Screen Capture and Scanner Input

You may not have the soft copy presentation. But as long as you have a TWAIN compliance hardware scanner, you can scan the document into AcuSTUDIO. You can also capture any part of your screen to share with your participants.

Trimming

There is no first take perfect recording even for professional trainers. AcuSTUDIO is equipped with one touch trimming function. Trainer can use this to erase unwanted recording. All annotations and animation clicks will be synchronized with the trimmed video.

Forum

Students will be able to post questions while watching playback content. When a question is posted, the creator of that content will be notified in his email which will also contain the hyperlink to this forum so that he can reply to that question.

Insert Pause during Playback

Trainer can insert a pause during playback when he comes to a point where he likes the students to work out some questions. Student can continue with the presentation by clicking on play again.

Transcript and Next slide view

AcuSTUDIO provides transcript and next slide view to help trainer with his presentation.

Multiple Layout Views

Audiences can choose to view video, audio, slide, full screen and combination view.

Technical Requirements Moderator and Participants

- Microsoft Windows 2000, XP
- Pentium 3, 800Mhz, 256MB RAM recommended
- Microsoft Internet Explorer 6.x
- Standard sound card with headset, microphone, speakers and webcam
