

AcuSTUDIO Lite

AcuSTUDIO Lite

A versatile software that enables you to create engaging rich media presentations easily. Combine different types of video, slide or screen recording, all in the same session. Animations in your presentations are not 'frozen' even with annotations over them. Distribute your presentation quickly and easily by publishing into any storage media including CD/DVD.

Animations Support

Unlike other products, using annotation tools will not freeze these animations. AcuSTUDIO Lite support animations such as PowerPoint animations, animated GIF as well as Flash.

Web collaboration

In web collaboration, AcuSTUDIO Lite allows user to scroll the web page and annotate using its comprehensive set of annotation tools. Unlike other products, annotation will not destroy hyperlinks within the webpage. Users can continue to navigate through the web pages after annotations.

Unicode Support

Even if you have an English operating system, Unicode support allows you to use AcuSTUDIO Lite in other languages. Trainer can include multi-language transcript to reach out to audience with different language needs. Playback content automatically detect your computer settings and display transcript in the preferred language.

Easy to use Graphical User Interface

AcuSTUDIO Lite GUI resembles that of Microsoft PowerPoint. You get all the type of views as well as drag and drop to move your presentation slides around. Of course you can insert, modify and delete any presentation slides as well. The major difference from that of Microsoft PowerPoint is that you can open Word Document, Picture files, Excel as well!

User can switch from web cam to screen capture during recording

Dynamic Source Switch

Training is not restricted to video presentation only. AcuSTUDIO Lite allows the trainer the switch between video presentation to screen capture. This will allow the trainer to conduct software training.

Integrated to Microsoft Office

You can now present using documents such as PPT, DOC and XLS. In the editing mode, double clicking on the document will open up PowerPoint, Word or Excel for editing. Other supported document types are JPG, GIF, BMP, PDF or SWF (Flash) files.

Manage link content

You can link any information such as movies, doc, PDF files from on your local hard disk. The system will copy these contents to the published folder and preserve the links. AcuSTUDIO Lite does not flatten the image when you use annotation over presentation slide, all hyperlinks are still accessible.

Rerecording on the fly

AcuStudio Lite allows you to rerecord any slides on the fly. Just click on the slide title again during the recording session. Choose the best recording for that slide in the GUI and delete the unwanted ones.

Customizable banner and background images

Customize the look and feel of your recorded presentation. Choose your own images for the top banner and background images

Screen Capture and Scanner Input

You may not have the soft copy presentation. But as long as you have a TWAIN compliance hardware scanner, you can scan the document into AcuSTUDIO Lite. You can also capture any part of your screen to present.

Trimming

There is no first take perfect recording even for professional trainers. AcuSTUDIO Lite is equipped with one touch trimming function. Trainer can use this to erase unwanted recording. All annotations and animation clicks will be synchronized with the trimmed video.

Insert Pause during Playback

Trainer can insert a pause during playback when he comes to a point where he likes the students to work out some questions. Student can continue with the presentation by clicking on play again.

Transcript and Next slide view

AcuSTUDIO Lite provides transcript and next slide view to help trainer with his presentation.

Multiple Layout Views

Audiences can choose to view video, audio, slide, full screen and combination view.

Easy Distribution

Distribute your presentations easily with a one click publish to any storage drive, CD or DVD.
