

AcuLe@rn™ Case Studies – Singapore

Justice On Line

Aculearn has established a vision in year 2001 to provide a single communication platform for video, audio and data collaboration (rich media) over the Internet. A platform that will enable small medium enterprises, multi-national corporations or military alike to communicate effectively over the Internet.

Singapore justice system has been hailed to be one of the most effective and efficient system in the world. The judiciary system has capitalized on the use of technology to increase its efficiency and effectiveness in serving the needs of the country. Singapore Justice On Line is initiated to improve many areas of the judiciary processes using technology.

One of the key area is court attendance. There are many cases that the sub courts need to handle each year. Some of the cases such as default payments, parking and traffic fines that can be processed within 10 to 30 minutes. However, the lawyer will need to spend time on commuting in heavy traffic and waiting for his time outside the court room.

Using Justice On Line system, the lawyer will be able to save on the commute and waiting time entirely. During the appointed time, the lawyer will go to the website and click on his court room. He will be put on wait list till the case before him is finished. When it comes to his case, the court will “click” to invite him into the virtual court room.

Once inside this virtual court room, the lawyer can upload his case file and continue with the proceedings. The entire court session can be archived and uploaded to the server. When the case is over, the court will save his case, upload, erase and invite the next lawyer.

Unlimited concurrent audio/video connections. Uniquely simple but powerful in features.

AcuCONFERENCE is selected to be the platform for Justice On Line after a series of vigorous tests against some of the world's leading vendors. The key differences that make AcuCONFERENCE stands out from the rest of the competitors are:

- Excellent video quality with unique frame control to ensure most natural video display.
- Superb audio with ambience sound suppression and short delay.
- Its ability to upload and delete presentation files during the session.
- Wide supported presentation format.
- Good integration support to queuing system.
